

High resolution image acquisition

High performance line sensor cameras are employed and they can contribute higher precise inspection minimizing the lens aberration for the widely required field of view.

Optimized illumination

The optimized illumination is designed for the size, color and material of the inspection objects.

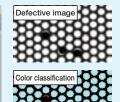

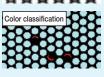

User friendly operation

Touch panel operation can lead the operators for the easy settings and inspection procedure.

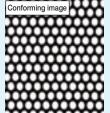

Inspection Result

Static Information

Inspection results can be viewed with the graphs and numbers, and the images can be recorded and displayed.

Simulation view

Inspection simulation can be available with the saved defect data.

The inspection sensitivity settings can be set according to the products.

Specifications

Objects	Porous honeycomb structure
Camera	Line sensor camera
Lighting	Line-type LED etc
Object size	Width 400mm, Length 400mm or phai 400mm
Performance	Minimum phai 1mm cell
Tact time	Minimum 5 seconds (at phai 150mm size of object)
Functions	Cell plugging detection, Cell number counting, Cell size measurement, Static information viewing, Image recording, Simulation, Inspection history viewing, Speed tracking, System log recording etc
Loading speed	200mm / sec to 500mm / sec
Operation temperature	10-35 degrees C
Operation humidity	20-80% RH (at no condensations)
Options	External input / output, Marking machine, Loading machine, Remote monitoring. *The power consumption, outline and weight should vary according to the system configuration and designing.

Design and specifications are subject to change without notice.
